

Introduction to Climate Change

Course Description

This micro course looks at Climate change, what causes it and what's being done to reduce its impact on the planet. The course then goes on to talk about the different sources and types of pollution including acid rain, noise and light.

Lastly the course discusses the loss of Biodiversity on the planet and what causes this.

Learning Objectives

By the end of this course, you will:

- Understand what climate change is and what causes it
- Be aware of the environmental impacts of pollution
- Understand what the loss of Biodiversity can impact.

Target Audience

This course is an awareness course that could be appropriate for anyone in the workplace who wants to know more about how to help reduce their businesses environmental impact.

Advantages

Online training is flexible, efficient and cost effective meaning the candidate can progress through the modules at their own pace and in their own time, so they can fit the training around their work and personal life.

Further Progression

For people in supervisor or management positions taking this course then any of our other business skills courses would complement this one.
